Global Finishing Solutions

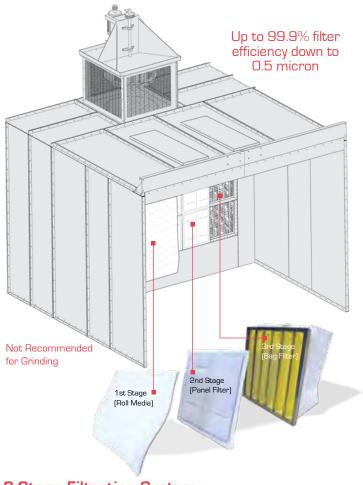

Dust Collection

Sanding & Grinding Booths

APPLICATIONS:

- Metal
- > Wood
- Fiberglass
- Laminates

BATCH STYLE Sanding Booths

3-Stage Filtration System

Easily accessible from inside the booth.

1st Stage **Roll Media**

2nd Stage Panel Filter

3rd Stage **Bag Filters**

Roll Media contains multi-layered polyester proper installation.

Part No:

216-502 - 36" x 50' 216-503 - 45" x 50'

The panel is constructed of two different layers media. The air-entry of tackified polyester side is constructed of a media, sealed together side is comprised of center. A galvanized ninea mixture of heavily gauge wire frame inside needled media to the panel touches the densify. The air leaving tackified sides of both side is jet-ink printed media. The air-entry layer The bag pockets on the lavered, non-migrating tackifier header 1/4" thick, tackified on the filter. the air-entry side.

Part No:

216-501 - 20" x 20" x 1"

The 6-pocket bag filter, is constructed of a composite of pre-filter, melt blown and spun bound polyester fibers. mixture of lofted denier so the tackified layers of The pockets are sewn fiber. The air-leaving each media touch in the together on the perimeter with two heat seals, forming three air channels in each bag pocket.

for identification and is constructed of multi- metal support is inserted multi-density into a galvanized metal polyester with a heavy, header. The galvanized contains an on the air-leaving side. acceptable sealing agent The air-leaving media inside of each header to is a heavily needled eliminate the possibility polyester, densified to of paint bypass within

Part No:

216-505 - 20" x 20" x 12"

BOOTH FEATURES

- Galvanized steel panels
- Heavy duty, high capacity, low noise plug fan (rated at 1.5" SP)
- Smooth interior for easy maintenance
- 3-Stage filtration system easily accessible from inside booth
- Energy efficient inside access light fixture(s)
- Re-circulates clean air
- Air make-Up not required
- Designed to comply with OSHA, NFPA, and **NEC** regulations

COMPLETE PACKAGE

All booth systems are shipped with:

- Fan
- Electric motor
- · Energy efficient light fixture(s)
- · Filters and grids
- Manometer for filter maintenance
- · Assembly hardware and drawings

OPTIONS

- White pre-coated panels
- Conveyor openings
- Booth extensions
- Product doors
- CP1 control panel (Motor HP, Voltage and Phase specific)

Notes:

- CFM rating based on clean filters

HIGH PRODUCTION Sanding and Grinding Booths

Total Air Re-Circulation

- 18-gauge galvanized steel panels, precision-flanged and prepunched for easy assembly (White pre-coat optional).
- Dust-laden air is pulled away from the worker at a rate of 120-140 FPM while clean air moves past the worker at the same rate.
- Energy efficient light fixture(s) with inside access for easy maintenance.

Normal Operation

Dust control is provided by a fan and filter system that pulls air through the power module.

The filter section of the power module removes the dust and clean air is exhausted back into the plant.

Up to 99.8% filter efficiency down to 0.5 micron

Electrical Requirements: Blower 208-230/460V 60 HZ Three Phase, Control Power 120V 60HZ Single Phase Shipped with fully assembled modules complete with fan, motor, cartridges, and timer board.

Normal Operation

Dust control is provided by a fan and filter system that pulls air through the power module.

The filter section of the power module removes the dust and clean air is exhausted back into the plant.

Models are complete with:

- High capacity HEPA filtration system. Obtaining a control efficiency of 99.9% at 0.3 micron particle size. (Meets requirements for Safe Hexavalent Chromium Arrestance)
- Magnahelic gauge for monitoring HEPA filtration performance

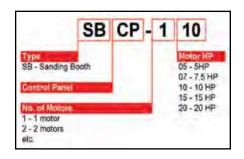

DELUXE CONTROL PANEL

Optional

Deluxe control panel (UL listed) is factory assembled, pre-wired and numbered, complete with fused disconnect, motor starter(s) stop/start switch, light switch, indicator lights, photohelic gauge, solid-state timer board, two position purge selector switch, and push button for manual purge. Selector switch can be set for continuous pulse cleaning or automatic cleaning controlled by the photohelic pressure gauge. The photohelic gauge monitors pressure drops

and initiates the automatic cleaning process. During automatic cleaning, high velocity air is automatically injected into each filter on a sequential basis to clean the filters and insure maximum airflow at all times and long filter life.

DUST COLLECTORS High Volume Air Capacities

Continuous Pulse-Jet Cleaning

The filter cartridges are cleaned automatically. The system remains on-line continuously for full-time pollution control, better product quality, and longer machine life. A solid-state timer controls cycle time. Solenoid valves introduce high-pressure air into each filter cartridge through the venturi opening above it. Reverse airflow cleans the cartridges. Collected dust falls to the bottom of the collector. Each cartridge module is cleaned in succession. Extremely high dust loadings are handled easily. These systems are available in continuous duty/automatic or intermittent manual cleaning versions.

EASY MAINTENANCE

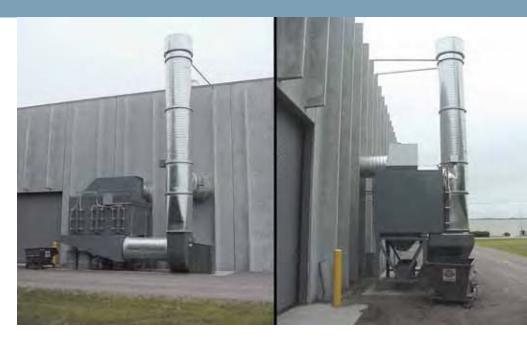

The downdraft system has been designed for easy maintenance. The front cartridge removal design allows personnel to service the unit through access portholes. Used cartridges can be removed and properly disposed.

DOWNDRAFT MODULE

The unique downdraft design uses gravity and a downward airflow to aid in the self-cleaning process. The air inlet is located at the top of the unit and the downdraft airflow forces dust directly into the collector hopper below. This design cleans the air efficiently resulting in lower operating costs.

DOWNDRAFT DESIGN

The downdraft airflow design with horizontal filter placement allows an increased number of filters to be used. The increased numbers of filters allow increased airflow through each module. Therefore, the physical size is minimized while the airflow is maximized.

WIDE RANGE OF APPLICATIONS

GFS dust collectors have been used on a wide variety of applications including welding, mixing, and conveyor transfer stations. They are particularly well suited for filtering very fine particulates in large air volumes. The compact design of the unit also makes it a good in-plant unit collector because it saves valuable floor space while minimizing the required ductwork.

FLEXIBILITY OF DESIGN

The downdraft cartridge design enables you to meet varying space and filter capacity requirements. The modular design also allows you to install the system you need now and as your requirements increase, you can add additional modules to meet your needs. Standard models range from a 4 to 80 cartridge capacity, enabling you to handle high volume air capacities.

GFS-80-10-4	200"	163"	72"	18,080	2.7:1	80	48,000	11,000				

The first digit in the Model No. indicates total number of filter cartridges in unit, second digit indicates number of horizontal filter rows, third digit indicates number of vertical filter rows.

MODULES Dust Collection

Features high efficiency cartridge filtration system that re-circulates clean filtered air. Open Louver and Spark Arrestor doors are available. Collector modules can be purchased separately.

- Heavy-duty construction, 12-gauge mild steel finish industrial blue
- · Factory assembled module includes:
 - High efficiency cartridge filters with positive locking mechanism
 - High velocity venturi for efficient operation
 - Direct drive blower and motor 208, 230/460V, 60-Hz. 3 PH
 - Choice of Open Louver or Spark Arrestor Doors (Note the door depth 18" vs. 5")
- 3-Pin timer board solid-state 115V factory adjusted at 100-milli-seconds on time, and a 10-second duration off time between pulses
- Compressed air requirements, clean filtered dry air, 6 CFM at 80 to 100 psi
- Complies with all Federal, OSHA and NFPA Regulations
- Optional deluxe control panel

Re-circulating clean air eliminates the need for expensive air make-up systems and outside ducting
